

CAMPOS®

Stretch knitted fabric.

LINEN

Fabrics made of linen fiber can absorb up to 20% of water without giving a damp sensation, since they are primarily based on cellulose. It is hygroscopic, that is, it absorbs heat and sweat without adhering to the body and evaporates water quickly, making it feel like a cool garment. This material does not allow bacteria to grow. It has significant breathability properties and remains cool and dry to the touch, which makes it perfect for summer, as it reduces body temperature, promoting well-being and comfort.

FIBER PROPERTIES

- Breathability
- Fresh
- Dry
- Antibacterial
- Odor inhibitor
