

# CAMPOS®

Stretch knitted fabric.

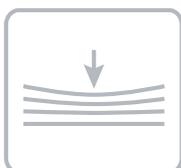

## RECYCLED POLYESTER

Recycled polyester has the same characteristics as virgin polyester, its main difference is that it is obtained from recycled materials, thus contributing to a lower environmental impact in its manufacture. PET plastic bottles are collected as raw material, 75% less CO2 is emitted in their manufacture than polyester virgin and does not require new oil for its manufacture, reducing its demand and environmental footprint. Using recycled polyester we do not lose quality, since in the recycling process the fiber is reconstituted at a molecular level and there is no difference between the two. As well as, we give a second post-consumer and post-industrial life to the polyester already used.

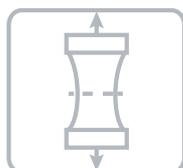

## FIBER PROPERTIES

- High resistance
- Tear resistance
- Abrasion resistant
- Elasticity
- Sustainable
