

# CAMPOS®

Stretch knitted fabric.

## TENCEL

---

Tencel is the most environmentally friendly cellulosic fiber that we currently have. It is produced exclusively from the wood pulp of eucalyptus trees. This is very sustainable as it grows very quickly, and can be grown without the need for pesticides and herbicides. This fiber is characterized by its softness, breathability and durability. Tencel is very soft to the touch and comfortable on the skin, making it ideal for fabrics that are in direct contact with the skin. Plus, it's wrinkle resistant and stays cool and dry. It is also hypoallergenic.

## FIBER PROPERTIES

---

- Soft
- Hypoallergenic
- Breathable
- Sustainable
- Odor inhibitor
