

VISCOSE

Viscose is a synthetic fiber made from cellulose, mainly from cotton and wood. It is soft and silky. In fact, due to its great softness and shine, viscose is known as artificial silk, which makes it attractive for high-quality garments. It is a natural and biodegradable product that achieves a soft, light, fresh fiber. It is a very versatile and affordable fiber, which makes it a popular choice in fabric manufacturing. It is breathable and prevents the development of bacteria and fungi. Provides perfect thermal insulation. It is also very resistant to abrasion and antistatic.

FIBER PROPERTIES

- Breathable
- Antibacterial
- Odor inhibitor
- Thermal insulation
- Cool
- Soft and light
- Brightness
- Antistatic
- Biodegradable
- Abrasion resistant
