

CAMPOS®

Stretch knitted fabric.

X-COOL

X-Cool is a synthetic fiber developed to provide comfort and coolness in hot and humid climates. It is characterized by its ability to evaporate sweat easily. It is light, breathable and dries quickly. This thread is synonymous with quality and originality, since, although there are other fabrics that simulate its properties, there is none comparable. It possesses superior heat transfer ability and heat dissipation ability due to the modifications of its molecular structure within the yarn, and it can also achieve optimal double effect of cold sensation and continuous cooling by further changing the physical structure of the thread surfaces and finally achieves the purpose of actual cooling. Meanwhile, its excellent, soft and light touch is maintained.

FIBER PROPERTIES

- Heat transfer
- Heat dissipation
- Breathable
- Dry
- Light and soft
