Stretch knitted fabric.

ALOE VERA

Aloe vera is a succulent plant known for its beneficial properties for the skin and overall health. Interestingly, this plant is native to warm and arid regions, such as northern Africa. Despite these conditions, aloe vera is exceptionally resilient and can survive in desert environments. The plant has developed a series of adaptations that allow it to conserve water and thrive in extremely dry conditions.

When aloe vera is used in the treatment of mattress fabrics, its natural ability to retain moisture is harnessed. This property is particularly valuable for people seeking comfortable rest, as aloe vera in the mattress helps keep the skin hydrated overnight, despite the natural moisture loss that occurs while we sleep.

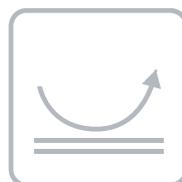

PROPERTIES OF THE TREATMENT

- Soft
- Sliding
- Stimulates new cells
- For sensitive skin
