

CAMPOS®

Stretch knitted fabric.

NEGATIVE IONS

The treatment of negative ions in mattress fabrics is a technology that aims to improve sleep quality and promote well-being. This technology involves the incorporation of negative ion particles into the mattress fabrics.

It vitalizes the cells of living beings and, therefore, improves bodily functions.

Alkalizes the body and acidic constitution, enhancing the immune system.

Acts as a revitalizer of cellular metabolism: assisting superoxide dismutase and catalase enzymes in neutralizing oxidative radicals.

Also functions as a regulator of the nervous system: inhibiting the oxidation of catecholamines (hormones that control stress).

Has relaxing effects by delaying the oxidation of serotonin secreted in the pineal gland, increasing brain alpha waves.

Improves muscle toning: Neutralizing lactic acid and reducing fatigue.

Enhances blood circulation: Increasing ionization of calcium and sodium in the blood and redu-

cing red blood cell aggregation while increasing gammaglobulin.

The treatment of negative ions in mattress fabrics aims to recreate this natural experience. Negative ions can interact with particles in the air, such as dust and allergens, and help eliminate them, contributing to a cleaner and healthier sleeping environment. Additionally, it has been suggested that exposure to negative ions may help reduce stress, improve mood, and promote more restful sleep.

PROPERTIES OF THE TREATMENT

- Relaxing
- Improves circulation
- Anti-stress
