

CAMPOS®

Stretch knitted fabric.

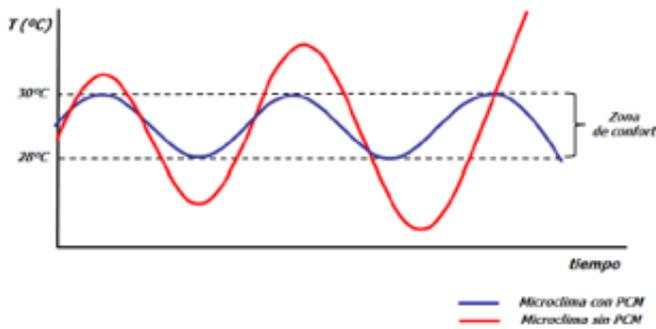

THERMOREGULATORY

This finish allows you to constantly control the temperature of your fabric so that it is always at the ideal point.

- Improves thermal comfort
- Reduces perspiration and sweating
- Enhances the quality of rest

PCM generates thermoregulation.

The thermoregulatory treatment in mattress fabrics is a technology designed to maintain an optimal temperature during sleep.

Thermoregulatory fabrics incorporate microcapsules that respond to body heat. When it's hot and the body sweats, these microcapsules absorb moisture and release coolness, helping to maintain a feeling of freshness and dryness. When it's cold, the microcapsules retain heat and provide a warmer and cozier sensation.

PROPERTIES OF THE TREATMENT

- Quality of rest
- Breathable
- Thermoregulator
