

CAMPOS®

Stretch knitted fabric.

ANTIALLERGY

Campos AntiAllergy treatment acts as a natural barrier against dust mites, dust, and bacteria, significantly reducing factors that may trigger allergies or respiratory issues.

It helps improve sleep quality by allowing deep, uninterrupted rest without worrying about irritants that could affect the respiratory system. By maintaining a more hygienic environment, our fabrics become a healthier place to sleep—particularly beneficial for people with asthma or allergies.

This treatment does not compromise the comfort or softness of the fabrics used in the mattress, so you can continue enjoying comfortable rest while staying protected from potential health disruptors.
