

CAMPOS®

Stretch knitted fabric.

FERAN ICE

Feeling overheated is one of the main reasons for poor sleep. When this happens, the body sweats to release heat. To help the body cool down, mattresses and pillows must remove moisture effectively.

FERAN ICE® is an innovative textile technology designed to enhance moisture management and provide a refreshing sensation. Specially developed for use in mattresses and sleep fabrics, FERAN ICE® improves thermal comfort and breathability.

The finish adds a soft hydrophilic layer to the mattress, topper, or pillow fabric, increasing moisture absorption. FERAN ICE® enhances evaporative performance and cools the body by drawing heat away—improving sleep quality.

This leads to faster evaporation and drying of the fabric. Since moisture evaporates from the fabric rather than the skin, it produces a pleasant cooling effect.
